

The Economic Value of  
Rogue Community College

# EXECUTIVE SUMMARY

JOSEPHINE & JACKSON COUNTIES

**R**OGUE Community College (RCC) creates value in many ways. The college plays a key role in helping students increase their employability and achieve their individual potential. The college draws students to the region, generating new dollars and opportunities for Josephine and Jackson Counties. RCC provides students with the education, training, and skills they need to have fulfilling and prosperous careers. Furthermore, RCC is a place for students to meet new people, increase their self-confidence, and promote their overall health and well-being.

RCC influences both the lives of its students and the regional economy. The college supports a variety of industries in Josephine and Jackson Counties, serves regional businesses, and benefits society as a whole in Oregon from an expanded economy and improved quality of life. The benefits created by RCC even extend to the state and local government through increased tax revenues and public sector savings.

This study measures the economic impacts created by RCC on the business community and the benefits the college generates in return for the investments made by its key stakeholder groups—students, taxpayers, and society. The following two analyses are presented:

### Economic impact analysis

### Investment analysis

All results reflect employee, student, and financial data, provided by the college, for fiscal year (FY) 2018-19. Impacts on the economy of Josephine and Jackson Counties are reported under the economic impact analysis and are measured in terms of added income. The returns on investment to students, taxpayers, and society in Oregon are reported under the investment analysis.

---

*RCC influences both the lives of its students and the regional economy.*

---

# Economic impact analysis

RCC promotes economic growth in Josephine and Jackson Counties through its direct expenditures and the resulting expenditures of students and regional businesses. The college serves as an employer and buyer of goods and services for its day-to-day operations. The college's activities attract students from outside Josephine and Jackson Counties, whose expenditures benefit regional vendors. In addition, RCC is a primary source of higher education to residents of Josephine and Jackson Counties and a supplier of trained workers to regional industries, enhancing overall productivity in the regional workforce.

## Operations spending impact

RCC adds economic value to Josephine and Jackson Counties as an employer of regional residents and a large-scale buyer of goods and services. In FY 2018-19, the college employed 1,140 full-time and part-time faculty and staff, 96% of whom lived within Josephine and Jackson Counties. Total payroll at RCC was \$36.9 million, much of which was spent in the region for groceries, mortgage and rent payments, dining out, and other household expenses. In addition, the college spent \$27.6 million on day-to-day expenses related to facilities, supplies, and professional services.

RCC's day-to-day operations spending added \$45.4 million in income to the region during the analysis year. This figure represents the college's payroll, the multiplier effects generated by the in-region spending of the college and its employees, and a downward adjustment to account for funding that the college received from regional sources. The \$45.4 million in added income is equivalent to supporting 1,230 jobs in the region.

## Construction spending impact

RCC invests in construction each year to maintain its facilities, create additional capacities, and meet its growing educational demands. While the amount varies from year to year, these quick infusions of income and jobs have a substantial impact on the regional economy. In FY 2018-19, RCC's construction spending generated \$2.9 million in added income, which is equivalent to supporting 47 jobs.

## Student spending impact

Around 6% of students attending RCC originated from outside the region in FY 2018-19, and some of these students relocated to Josephine and Jackson Counties to attend RCC. These students

IMPACTS CREATED

may not have come to the region if the college did not exist. In addition, some in-region students, referred to as retained students, would have left Josephine and Jackson Counties if not for the existence of RCC. While attending the college, these relocated and retained students spent money on groceries, accommodation, transportation, and other household expenses. This spending generated \$13.7 million in added income for the regional economy in FY 2018-19, which supported 293 jobs in Josephine and Jackson Counties.

## Alumni impact

The education and training RCC provides for regional residents has the greatest impact. Since its establishment, students have studied at RCC and entered the regional workforce with greater knowledge and new skills. Today, thousands of former RCC students are employed in Josephine and Jackson Counties. As a result of their RCC educations, the students receive higher earnings and increase the productivity of the businesses that employ them. In FY 2018-19, RCC alumni generated \$306.2 million in added income for the regional economy, which is equivalent to supporting 4,319 jobs.

## Total impact

RCC added \$368.2 million in income to the economy of Josephine and Jackson Counties during the analysis year, equal to the sum of the operations and construction spending impacts, the student spending impact, and the alumni impact. For context, the \$368.2 million impact was equal to approximately 2.8% of the total gross regional product (GRP) of Josephine and Jackson Counties. This contribution that the college provided on its own was as large as the entire Information industry in the region.

RCC's total impact can also be expressed in terms of jobs supported. The \$368.2 million impact supported 5,889 regional jobs, using the jobs-to-sales ratios specific to each industry in the region. This means that one out of every 29 jobs in Josephine and Jackson Counties is supported by the activities of RCC and its students. In addition, the \$368.2 million, or 5,889 supported jobs, stemmed from different industry sectors. Among non-education industry sectors, RCC's spending and alumni in the Health Care & Social Assistance industry sector supported 1,477 jobs in FY 2018-19. These are impacts that would not have been generated without the college's presence in Josephine and Jackson Counties.

# Investment analysis

An investment analysis evaluates the costs associated with a proposed venture against its expected benefits. If the benefits outweigh the costs, then the investment is financially worthwhile. The analysis presented here considers RCC as an investment from the perspectives of students, taxpayers, and society in Oregon.

## Student perspective

In FY 2018-19, RCC served 8,872 credit and 5,344 non-credit students. In order to attend the college, the students paid for tuition, fees, books, and supplies. They also took out loans and will incur interest on those loans. Additionally, students gave up money they would have otherwise earned had they been working instead of attending college. The total investment made by RCC's students in FY 2018-19 amounted to a present value of \$28.9 million, equal to \$18 million in out-of-pocket expenses (including future principal and interest on student loans) and \$11 million in forgone time and money.

In return for their investment, RCC's students will receive a stream of higher future earnings that will continue to grow throughout their working lives. For example, the average RCC associate degree graduate from FY 2018-19 will see annual earnings that are \$7,400 higher than a person with a high school diploma or equivalent working in Oregon. Over a working lifetime, the benefits of the associate degree over a high school diploma will amount to an undiscounted value of \$273.8 thousand in higher earnings per graduate. The present value of the cumulative higher future earnings that RCC's FY 2018-19 students will receive over their working careers is \$155 million.

The average associate degree graduate from RCC will see an increase in earnings of **\$7,400** each year compared to a person with a high school diploma or equivalent working in Oregon.

Source: Emsi employment data.

The students' benefit-cost ratio is 5.4. In other words, for every dollar students invest in RCC, in the form of out-of-pocket expenses and forgone time and money, they will receive a cumulative value of \$5.40 in higher future earnings. Annually, the students' investment in RCC has an average annual internal rate of return of 23.5%, which is impressive compared to the U.S. stock market's 30-year average rate of return of 9.9%.

### Taxpayer perspective

RCC generates more in tax revenue than it takes. These benefits to taxpayers consist primarily of taxes that the state and local government will collect from the added revenue created in the state. As RCC students will earn more, they will make higher tax payments throughout their working lives. Students' employers will also make higher tax payments as they increase their output and purchases of goods and services. By the end of the FY 2018-19 students' working lives, the state and local government will have collected a present value of \$51.4 million in added taxes.

Benefits to taxpayers will also consist of savings generated by the improved lifestyles of RCC students and the corresponding reduced government services. Education is statistically correlated with a variety of lifestyle changes. Students' RCC educa-

tions will generate savings in three main categories: 1) healthcare, 2) crime, and 3) income assistance. Improved health will lower students' demand for national health care services. In addition, students will be less likely to interact with the criminal justice system, resulting in a reduced demand for law enforcement and victim costs. RCC students will be more employable, so their reduced demand for income assistance such as welfare and unemployment benefits will benefit taxpayers. For a list of study references, contact the college for a copy of the main report. Altogether, the present value of the benefits associated with an RCC education will generate \$4.7 million in savings to state and local taxpayers.

Total taxpayer benefits amount to \$56 million, the present value sum of the added taxes and public sector savings. Taxpayer costs are \$30.8 million, equal to the amount of state and local government funding RCC received in FY 2018-19. These benefits and costs yield a benefit-cost ratio of 1.8. This means that for every dollar of public money invested in RCC in FY 2018-19, taxpayers will receive

a cumulative value of \$1.80 over the course of the students' working lives. The average annual internal rate of return for taxpayers is 6.1%, which compares favorably to other long-term investments in the public and private sectors.

## Social perspective

Society as a whole in Oregon benefits from the presence of RCC in two major ways. Primarily, society benefits from an increased economic base in the state. This is attributed to higher student earnings and increased business output, which raise economic prosperity in Oregon.

Benefits to society also consist of the savings generated by the improved lifestyles of RCC students. As discussed in the previous section, education is statistically correlated with a variety of lifestyle changes that generate social savings. Note that these costs are avoided by the consumers but are distinct from the costs avoided by the taxpayers outlined above. Healthcare savings include avoided medical costs associated with smoking, alcohol dependence, obesity, drug abuse, and depression. Savings related to crime include reduced security expenditures and insurance administration, lower victim costs, and reduced expenditures by the criminal justice system. Income assistance savings include reduced welfare and unemployment claims. For a list of study references, contact the college for a copy of the main report.

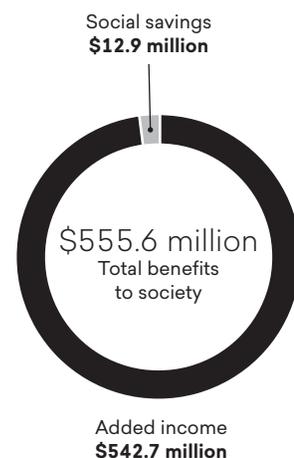

Altogether, the social benefits of RCC equal a present value of \$555.6 million. These benefits include \$542.7 million in added income through students' increased lifetime earnings and increased business output, as well as \$12.9 million in social savings related to health, crime, and income assistance in Oregon. People in Oregon invested a present value total of \$85 million in RCC in FY 2018-19. The cost includes all the college and student costs.

The benefit-cost ratio for society is 6.5, equal to the \$555.6 million in benefits divided by the \$85 million in costs. In other words, for every dollar invested in RCC, people in Oregon will receive a cumulative value of \$6.50 in benefits. The benefits of this investment will occur for as long as RCC's FY 2018-19 students remain employed in the state workforce.

## Summary of investment analysis results

The results of the analysis demonstrate that RCC is a strong investment for all three major stakeholder groups—students, taxpayers, and society. As shown, students receive a great return for their investments in an RCC education. At the same time, taxpayers' investment in RCC returns more to government budgets than it costs and creates a wide range of social benefits throughout Oregon.

### SOCIAL BENEFITS IN OREGON FROM RCC

# Conclusion

The results of this study demonstrate that RCC creates value from multiple perspectives. The college benefits regional businesses by increasing consumer spending in the region and supplying a steady flow of qualified, trained workers to the workforce. RCC enriches the lives of students by raising their lifetime earnings and helping them achieve their individual potential. The college benefits state and local taxpayers through increased tax receipts and a reduced demand for government-supported social services. Finally, RCC benefits society as a whole in Oregon by creating a more prosperous economy and generating a variety of savings through the improved lifestyles of students.

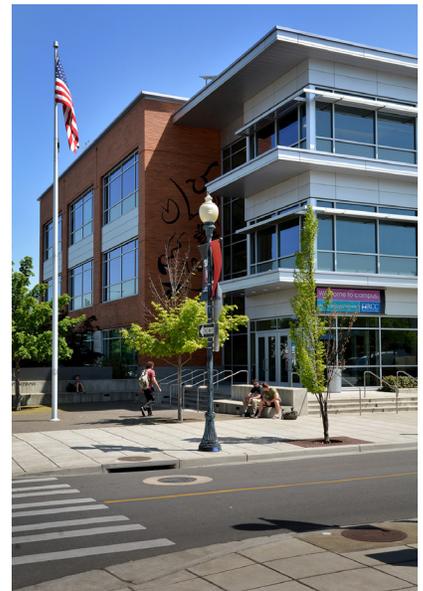

## About the study

Data and assumptions used in the study are based on several sources, including the FY 2018-19 academic and financial reports from RCC, industry and employment data from the U.S. Bureau of Labor Statistics and U.S. Census Bureau, outputs of Emsi's Multi-Regional Social Accounting Matrix model, and a variety of studies and surveys relating education to social behavior. The study applies a conservative methodology and follows standard practice using only the most recognized indicators of economic impact and investment effectiveness. For a full description of the data and approach used in the study, please contact the college for a copy of the main report.
